## EXECUTIVE SUMMARY OF THE REPORT

### 1. INTRODUCTION

**M/s. Spectrum Dyes and Chemicals Pvt. Ltd.** is a large scale industrial unit which is located at Block no-484, 502, 503-A, 504 & 505, N.H. No.8, Palsana-394315, Dist.: Surat, Gujarat. The company manufactures Dyes and intermediate. proposes expansion of Dyes and Chemicals unit as per MoEFCC, New Delhi, EIA Notification 14<sup>th</sup> September, 2006 and its amendment there of. The baseline study for conducting EIA Study based on the three months field data collected within 10 km radius from project site during post monsoon season from 1<sup>st</sup> October 2017 to 31<sup>st</sup> December 2017 and the whole EIA report has been prepared by M/s. En-vision Environmental Services, Surat. The same data has been used in assessment of impacts.

### 2. PROJECT DESCRIPTION

#### 2.1 PROJECT DETAILS

Category of the project:	A
S. No. in the Schedule:	5(f) Synthetic Organic Chemicals industry
Location of the project:	Block no-484, 502, 503-A, 504 & 505, N.H.No.8, Palsana-394315, Dist.: Surat, Gujarat.
Total project cost:	Rs. 47.5783 crore
Cost for EPCM (Environmental Pollution Control Measures):	Capital Cost: Rs. 3,155.91 Lacs and Recurring cost: Rs. 1,165.38 Lacs Per Annum.

#### 2.2 PROJECT REQUIREMENT

PARTICULARS	REQUIREMENT			
		Existing	Proposed	Total
Land Requirement		46158.23sq. m	3666.29sq. m	49824.52 sq. m
Water Requirement and its Source	Source from existing 4 Nos. of bore wells and proposed new 3 nos; of Bore- well	1142.5KLD	1557.5 KLD	2700 KLD
Electricity Requirement and its Source	DGVCL	4000 KVA	2000 KVA	6000 KVA
	Gas Engine	1250 KVA	--	--
	Standby			
	Gas Engine	1250 KVA	1250 KVA	2500 KVA
	D.G 2x380KVA	760 KVA	--	760 KVA
	D.G 2x500KVA	1000 KVA	--	1000 KVA
	D.G 2x1250KVA	2500 KVA	--	2500 KVA
Manpower Requirements		1080 Nos	122 Nos	1202 Nos.
Fuel Requirement	Coal	50 tons/day	25tons/day	75 tons/day
	Natural Gas	460 scm/hr	--	460 scm/hr
	GAS	10 SCM/hr	--	10 SCM/hr

## 2.3 PRODUCT LIST

### 1A: List of Products along with their Production Capacity

SR. NO.	NAME OF PRODUCTS	Existing (MT/ MONTH)	Proposed (MT/ MONTH)	Total after expansion (MT/ MONTH)
1	S.O.Dyes	250	650	900
2	Dispersing Agent	1500	0	1500
3	Textile Auxiliaries	2125	-2125	0
4	Hydros & Speciality Chemicals	1000	-1000	0
5	Dyes Intermediate	400	350	750
<b>Total</b>				<b>3150</b>
<b>OR</b>				
1	Formulated SO Dyes	-	2400	2400
2	Dyes Intermediate	400	350	750
<b>Total</b>				<b>3150</b>

### 1B. List of Byproducts along with their Production Capacity

SR. NO.	NAME OF BYPRODUCTS	Existing (MT/ MONTH)	Proposed (MT/ MONTH)	Total after expansion (MT/ MONTH)
1	RC DMF (Recovered)	40	0	40
2	RC Methanol (Recovered)	130	0	130
3	RC Acetone (Recovered)	15	0	15
4	RC Sodium Sulphite (Recovered)	15	0	15
5	RC Toluene (Recovered)	7.5	0	7.5
6	Sodium Bromide Solution	15	0	15

## 2.4 RAW MATERIAL

Raw material for dyes and chemicals unit will be purchased from the different sources and it will be stored in chemical storage area in Carboys, Drums, bags and some are in storage tanks. Transportation of raw materials are made through road by trucks/tankers.

## 2.5 WATER CONSUMPTION & WASTE WATER GENERATION

Total water requirement for the proposed project will be 2700 KLD which mainly for process, Boiler & cooling (make up water), Domestic uses and for gardening & others. Total water requirement shall be met from existing 4nos. of bore well and proposed 3 nos. of bore well. 2245.0 KL/day industrial wastewater generated from process & utilities of the proposed project. Domestic sewage (75.0 KLD) generated will be treated in Secondary Treatment Plant. Generated industrial effluents will be treated in proposed ETP. Existing process effluent is sent to CETP of M/s. NPICSL, hence now onward, treated effluents will also be sent to CETP of M/s. NPICSL, Palsana for further treatment and disposal

## 2.6 AIR EMISSION AND AIR POLLUTION CONTROL MEASURES

The air emission from the proposed project would be the flue gas emission from boiler, Thermic fluid heater (boiler), Gas Generator and Diesel based D.G. Set. Major pollutant *i.e.* PM<sub>10</sub>, PM<sub>2.5</sub>, SO<sub>2</sub>, NO<sub>x</sub> is generated from the stacks attached to unit. From the proposed unit process emission will be generated.

**FLUE GAS EMISSION AND CONTROL MEASURES ARE GIVEN IN FOLLOWING TABLE:**

**A FLUE GAS STACKS : [EXISTING]**

Stack No.	Stack Attached To	Stack Height	Stack Diameter	Fuel	Pollutants	Permissible value	APC Attached
1	Steam Boiler6 MTPH (Running) 4 MTPH (Stand by) *	36.5 M	1300 mm	Coal, Lignite	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	High Efficiency Multi Cyclone Separator, Bag filter
2	Thermo pack2,00,000 Kcal/Hr	21 M	250 mm	NG	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Sufficient Stack Height
3	HAG	34 M	1000 mm	Coal, Lignite	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Dual Teema Cyclone Separator, Bag filter
4	Thermo pack 3,00,000 Kcal/Hr. Heat transfer area 24m <sup>2</sup>	M 5	305 mm	NG	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Sufficient Stack Height
5	(LDO/HSD)/NG Based Power Plant (stand by )	30 M	800 mm	LDO/ HSD/ NG	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Sufficient Stack Height
6	(LDO/HSD)/NG Based Power Plant on plot no. 484 (stand by)	32 M	800 mm	LDO/ HSD/ NG	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Sufficient Stack Height
7	DG Set – 02 Nos stand by (380 KVA)	11 M	150 mm	HSD	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Sufficient Stack Height
8	DG Set – 02 Nos stand by (500 KVA)	11 M	150 mm	HSD	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Sufficient Stack Height
9	DG Set – 02 Nos stand by (1250 KVA)	11 M	150 mm	HSD	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	Sufficient Stack Height

Note - \* indicate that in proposed expansion, we will resell our Existing 4 MTPH Boiler (Stand by)

**A Flue Gas Stack: [ Proposed]**

Stack No.	Stack Attached To	Stack Height	Stack Diameter	Fuel	Pollutants	Permissible value	APC Attached
1	Steam Boiler 10 MTPH **	36 M	1450 mm	Coal, Lignite	PM So <sub>x</sub> No <sub>x</sub>	150mg/Nm <sup>3</sup> 100 ppm 50 ppm	ESP (Combine Stack and APC for boiler and HAG)

10	Primary Treatment Plant (Equalization tank)	3.5 M	355 mm	-	Cl <sub>2</sub> Hcl Br <sub>2</sub> Hbr	-	Packed column scrubber

## 2.7 SOLID WASTE GENERATION AND DISPOSAL

All the solid/Hazardous waste will be collected, stored, transport and disposed properly as per the GPCB guidelines. For which company has obtained membership for the TSDF site as required. -IX.

S. No.	TYPE OF HAZARDOUS WASTE	EXISTING (MT/month)	PROPOSED (MT/month)	TOTAL (MT/month)	WASTE CATEGORY	SOURCE	WASTE MANAGEMENT DETAILS
							DISPOSAL
1	ETP Sludge	500	750	1250	35.3	Effluent Treatment Plant	Collection, Storage, Transportation, Disposal at GPCB approved TSDF site
2	Used/spent Oil	1.8 MT/Year	0	1.8 MT/Year	5.1	Various maintenance processes	Collection, Storage, Transportation, Disposal by selling to registered re-refiner
3	Discarded Containers	60000 MT/Year	0	60000 MT/Year	33.3	Various production units	Collection, Storage, Decontamination, Transportation, Disposal by selling to registered party
4	Process Waste	5	0	5	26.1	Manufacturing process	Collection, Storage, Transportation, Disposal at GPCB approved CHWIF
5	Distillation Residue	75	100	175	36.1	Manufacturing process	Collection, Storage, Transportation, Disposal at GPCB approved CHWIF or co/pre-processing
6	GYPSUM	500	0	500	D2	Effluent Treatment Plan	Collection, Storage, Transportation, Disposal by selling to actual user authorized by GPCB

### 3. BASELINE ENVIRONMENT

The baseline environmental quality of Air, water, soil, noise, socioeconomic status and ecology has been assessed in the post-monsoon season (1<sup>st</sup> October 2017 to 31<sup>st</sup> December 2017) in a study area of 10 Km radial distance from the project site which shows a healthy environment.

S. NO.	NEAREST INFRASTRUCTURE FEATURE	DISTANCE FROM PROJECT SITE
1.	Nearest Village	Palsana at around 1.9 km in SE
2.	Nearest National Highway	NH-8 at around 0.05 Km E
3.	Nearest State Highway	SH-168 at around 1.1 Km S
4.	Nearest Railway Station	Chalthan at around 7.0 Km NNW
5.	River	Mindhola at around 2.6 Km SE
6.	Airport	Surat at around 24.3 km NWW
7	Reserve Forest/National Park/Protected Forest	None within a radius of 10 Km
8	Severely Polluted Area	Vapi 96 Km S, Vatva 261 Km NNW and Ankleshwar 65 Km N.
9.	Seismicity	Zone III

#### 3.2 MICRO-METEOROLOGY

The study was conducted during the months October, November and December (i.e. 1st October 2017 to 31st December 2017), which are considered to be representative of Post-monsoon and winter season. The maximum temperature 29.9°C reached in October 2017 which represent the hot month. The coldest month was December when temperature drops to 22.2°C. During the other months, temperature was more or less moderate in nature and pleasant to bear.

The predominant wind direction during this Study period is observed to be blowing from North East. Average wind speed during this period is 1.1 m/s. Calm wind during this period 32.7 %.

#### 3.3 AMBIENT AIR QUALITY

The ambient air samples were collected from eight locations and analyzed for PM<sub>10</sub>, PM<sub>2.5</sub>, SO<sub>2</sub>, NO<sub>x</sub>, CO and VOC. As per the monitoring in Post-monsoon season, PM<sub>10</sub> varied between 56.20 µg/m<sup>3</sup> to 63.20 µg/m<sup>3</sup> (min); 60.70 µg/m<sup>3</sup> to 65.20 µg/m<sup>3</sup> (max); 59.91 µg/m<sup>3</sup> to 64.16 µg/m<sup>3</sup> (mean); PM<sub>2.5</sub> varied between 29.30 µg/m<sup>3</sup> to 32.20 µg/m<sup>3</sup> (min); 32.20 µg/m<sup>3</sup> to 34.70 µg/m<sup>3</sup> (max); 30.77 µg/m<sup>3</sup> to 33.53 µg/m<sup>3</sup> (mean); SO<sub>2</sub> varied between 14.30 µg/m<sup>3</sup> to 17.90 µg/m<sup>3</sup> (min); 15.80 µg/m<sup>3</sup> to 19.60 µg/m<sup>3</sup> (max); 15.19 µg/m<sup>3</sup> to 18.60 µg/m<sup>3</sup> (mean); NO<sub>x</sub> varied between 17.10 µg/m<sup>3</sup> to 21.40 µg/m<sup>3</sup> (min); 19.10 µg/m<sup>3</sup> to 24.10 µg/m<sup>3</sup> (max); 18.22 µg/m<sup>3</sup> to 22.47 µg/m<sup>3</sup> (mean); CO varied between 230.00 µg/m<sup>3</sup> to 510.00 µg/m<sup>3</sup> (min); 250 µg/m<sup>3</sup> to 540 µg/m<sup>3</sup> (max); 239.58 µg/m<sup>3</sup> to 525.21 µg/m<sup>3</sup> (mean); VOC detected at project site only and its concentration is 0.70 µg/m<sup>3</sup> (min); 0.90 µg/m<sup>3</sup> (max); 0.83 µg/m<sup>3</sup> (mean). From the above mentioned results it is observed that PM<sub>10</sub>, PM<sub>2.5</sub>, SO<sub>2</sub> and NO<sub>x</sub> concentrations are well below the stipulated standards of CPCB/GPCB.

#### 3.4 GROUND WATER QUALITY MONITORING

The pH varied 6.72 to 7.27; Total Dissolved Solids 540 mg/L to 1448 mg/L; Chemical Oxygen Demand 8.0 mg/L to 16.0 mg/L; Nitrate 6.0 mg/L to 24.0 mg/L; Calcium as Ca<sup>+2</sup> 32.0 mg/L to 84.0 mg/L, Magnesium mg<sup>+2</sup> 22.24 mg/L to 36.42 mg/L; Chloride 60.0 mg/L to 545.0 mg/L; Sulphate 32.0 mg/L to 72.0 mg/L.

### **3.5 SURFACE WATER**

The pH varied 6.80 to 7.57; Total Dissolved Solids 238 mg/L to 1088 mg/L; Chemical Oxygen Demand 8.0 mg/L to 96.0 mg/L; Biochemical Oxygen Demand for 3 days at 27°C 2.0 mg/L to 90 mg/L; Nitrate 10.0 mg/L to 28.0 mg/L; Chloride 25.0 mg/L to 210 mg/L; Sulphate 8.0 mg/L to 34.0 mg/L. Turbidity 0.80 NTU to 32.4 NTU, Calcium Ca+2 32.0 mg/L to 102.4 mg/L, Magnesium mg+2 7.29 mg/L to 56.8 mg/L.

### **3.6 BACKGROUND NOISE LEVEL**

The noise level measured in study area at different eight locations. The Project site is only pertaining in category of industrial area and the noise level was found between 61.00 dBA to 65.0 dBA in daytime and 59.40 dBA to 61.30dBA in night time. The noise levels varied in the residential area of the study area during day time [night time] in the range of 60.00-68.80 [54.20-61.60] dBA.

### **3.7 SOIL QUALITY**

Different parameters are analyzed to know the quality of soil in the study area. The porosity and water holding capacity of soils are in the range of 41.30 % to 42.50 % and 28.70 % to 30.79 %. The TDS was present in range between 2776 mg/Kg to 3140 mg/Kg. Chemical properties like pH are in the range of 7.50 to 7.80. Nitrate and Sulphate were observed in the range of 50 mg/Kg to 60 mg/Kg and 262 gm/Kg to 285 mg/kg and alkalinity 772 mg/Kg to 792 mg/Kg. Other parameters analyzed in soil sample were observed under limit.

### **3.8 LAND USE PATTERN**

Land use within 10 Km radius of the study area has been determined with the help of satellite imagery, and broadly consists of settlements, Industrial, Tank/River/reservoir, Single crop, land with scrub, land without scrub, mining area and stony waste area and predominant land use is Single crop. Agricultural Land(80.55%), Barren/Un-cultivable/Waste/Scrub land(6.23%),Water Body(0.55%), Industrial land(7.18).

### **3.9 SOCIO-ECONOMIC STUDY**

The proposed project area falls under state Gujarat, Surat district and comprises 43 villages are falling in tehsil Palsana, 19 villages are falling in tehsil Chorasi, 15 villages falling in Jalalpore tehsil and 05 villages are falling in Navsari tehsil under district of Surat Gujarat state in the study area. The information/data has been analysed for all the 83 villages. The total households are 53341 in the region. The composition of the population in project area 231050 was found to be slightly skewed in favor of male. Total males are 128815 and total females are 102235 this is reflected in the males are more than females. Total SC population is 8362 (3.62%); total ST population is 67710 (29.30%). The ratio (number of female per thousand male) in the surveyed area is 793 this shows that male population is higher in the region as compared with the female population. The social development of a region is signified by many indices. One of which is literacy status of the population. The literacy rate in the project area is around 162870 (70.49%).

### **3.10 ECOLOGICAL ENVIRONMENT**

Neither the core area nor the buffer zone is located in any ecologically sensitive area. There are no reserve forests, wildlife sanctuaries or national parks, wildlife migratory corridors, or important bird areas (IBAs). There are no rare or endangered or threatened (RET) species and all the species are common and of widespread occurrence. The atmospheric emissions from the stack of the proposed expansion are not going to significantly alter the ambient air quality. When all issues and the results are taken in to consideration, the project is not going to endanger any endangered species and its impacts on flora and fauna shall remain within the CPCB permitted limits. It is easily possible to attain the global objective of “No net loss” of biodiversity.

## **4. ANTICIPATED ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES**

### **4.1 IMPACT ASSESSMENT**

An effort has been made to identify various environmental, social and ecological impacts due to proposed expansion project during construction and operation phases considering present environmental scenario as baseline. The corresponding mitigation measures to take care of the adverse impacts are also discussed in following sections.

### **4.2 IMPACTS DURING CONSTRUCTION PHASE AND ITS MITIGATION MEASURES**

During Construction Phase, the Fugitive Dust Emission due to civil work and vehicular movement is not expected to spread too far as water spraying will be carried out to suppress the dust emission at the site and as well as on road. The increase in noise levels due to the movement of vehicles will be taken care of by regulating the movement of vehicles and the impact on the human beings will be taken care of by providing the working people with ear plugs / ear muffs. As the proposed expansion site is mostly barren land having shrubs and herbs, there will not be any significant impact on the ecology of the study area.

### **4.3 IMPACT DURING OPERATION PHASE AND MITIGATION MEASURES**

#### **4.3.1 AIR ENVIRONMENT**

Major air emissions are anticipated by the gaseous emissions from a single or small group of stacks is a local phenomenon. Fugitive dust emission will be due to raw materials handling, loading and unloading of raw materials and finished goods, conveying and feeding point, vehicular movements, crushing and screening operations etc. The ISCST3 scientific model has been used to predict the proposed air quality on the environment. The results of the air modeling study indicates that the maximum Ground Level Concentration (GLC) for the parameter PM will be 3.5797  $\mu\text{g}/\text{m}^3$ , NO<sub>x</sub> will be 0.50569  $\mu\text{g}/\text{m}^3$ , SO<sub>2</sub> will be 1.01139  $\mu\text{g}/\text{m}^3$  and HCL will be 0.1063  $\mu\text{g}/\text{m}^3$  due to the proposed project.

#### **4.3.2 NOISE ENVIRONMENT**

The noise pollution management will be taken up in the following manners;

- By selecting low noise generating equipment,
- Isolating the noise generating equipments and working area
- Job rotation system will be provided as it is implementing in the existing unit
- By administrative and safety measures, providing noise level monitoring, remedial measures, providing noise safety appliances to the working personnel.

By these measures, it is anticipated that noise levels in the plant will be maintained below 75 dBA.

#### **4.3.3 WATER ENVIRONMENT**

The water requirement for the existing facilities is 1142.5 KLD and for expansion will be 1557.5 KLD. Hence total water requirement will be 2700.0 KLD. Maximum recycle of treated water in cooling tower and steam condensate in boiler will be carried out thus water requirement will reduced. Mainly water requirement is for process, boiler and cooling tower make-up, washing and other utility, domestic and for gardening purpose. Total water requirement will be met from ground water using existing 4nos. of bore well and proposed 3 nos. of bore well.

#### **4.3.4 SOIL ENVIRONMENT**

The main source of impact on land and Soil environment will be due to hazardous waste generated during construction and operation activities. The proposed project activity will be located on flat terrain industrial land; no significant topographical change is expected due to construction activities.

The hazardous waste generated from process are process waste and solid waste from ETP are sent to TSDF site for suitable treatment, and empty bags discarded containers/drums/liner/carobys/barrels will be sent back to supplier/ to GPCB approved recycler, etc. The waste oil generated from machinery will be used as lubricant or sent to GPCB approved recycler for suitable treatment.

#### **4.3.5 GREEN BELT DEVELOPMENT**

About 8185 sq.m area i.e. 16.42 % of total project plot area is developed as green belt at plant boundary, road side, around offices and buildings and Stretch of open land. Unit has already developed compensatory greenbelt of 5400 sq.m area i.e. 10.83 % of the total project plot area at Udhana-Magdalla Road, Surat and submitted in compliance report of our pervious environment clearance for each half year to the Ministry of Environment, Forest and Climate Change, Regional office-Bhopal. Unit will develop another 2000 sq. m area i.e 4.06 % of total project area with total investment of Rs.15 Lacs approx. for the green belt plantation. Total Green belt area of total project area would be 31.31 %.

#### **5. ENVIRONMENTAL MONITORING PROGRAMME**

A regular monitoring of environmental parameters like air, water, noise and soil as well as performance of pollution control facilities and safety measures in the plant are important for proper environmental management of any project. Therefore, the environment and safety cell will handle monitoring of air and water pollutants as well as the solid wastes generation as per the requirements of GPCB/CPCB. The routine monitoring programme will be implemented at site. Besides, to this monitoring, the compliances to all environmental clearance conditions and regular permits from GPCB/CPCB will be monitored and reported periodically.
